## Objective

To leverage my skills and experience in frontend development to create engaging, responsive, and user-friendly web interfaces that meet the needs of clients and end-users. Seeking a challenging role in a dynamic and collaborative team environment that will enable me to grow as a frontend developer and contribute to the success of the organization.

## Work Experience

- ZURI X HNG9** October 2022 - November 2022  
Front-End Developer (intern)
    - I worked on a web-app called CATCH-UP, this web-app allows you schedule hangout with your friends, where you can unwind after a busy week. CatchUp makes your hangout decisions easy.

My specific contribution to this web-app was the UI of the Account Settings Page, where the user can edit and update his/her personal information anytime.

I also developed the UI of the Catch-Up Error404 Page, this page alerts the user of a broken link on the web app. Other pages I developed was the Dashboard Nav-bar (mobile view).

  - I cloned the website of UI of a web-app called "Metabnb" using ReactJs and CSS. Metabnb is a rent place similar to Airbnb but in the metaverse.
- FREELANCE** July 2022 - Till Date.  
Front-End Developer
  - Developing both clients and personal projects that are visually appealing, functional and with a responsive web Interfaces that provides exceptional user experiences.

## Projects

- Food Website**
  - This is a responsive food website that currently allows the user to filter food types and prices based on their preferred choice. It was built with React and Tailwind-CSS.
- Password Generator**
  - This password generator helps you generate 8 digit strong and secured password, allows you copy and paste wherever you want it. Further saving you the time of thinking too hard on what password to use. It was built with HTML, CSS, JAVASCRIPT.
- To-Do App**

This app was built with React and Tailwind-CSS. It helps you achieve the following:

  - Write your daily Task
  - Select a date and time for each task
  - Mark completed Task
  - Prioritize your task based on the most important
  - Delete a task
  - Edit a task
  -

## Skills

- HTML
- CSS
- JAVASCRIPT
- REACTJS
- Git & Github
